Abstract (en)  
The invention comprises an auger feeder (2), a receiving hopper (3), a combustion chamber (9), a burner (8), a blower fan (20) and a second outlet (21) for hot air; which incorporates a heat-exchanger unit (13) which is independent of the detachable combustion chamber (9); formed by second vertical tubes (16) with the blower fan (20) coupled on the heat-exchanger unit (13) at the opposite end furthest from the combustion chamber (9). Between the heat-exchanger unit (13) and a combustion-gas outlet (12) from the combustion chamber (9), there is a first combustion-gas passage (I) formed by a further set of first vertical tubes (14) that are detachable and sliding, said tubes having a diameter greater than the second vertical tubes (16) of the heat-exchanger unit (13).
