Abstract (en)

[origin: EP3056843A1] A refrigerator is provided. The refrigerator includes a cabinet (11) having a storage compartment, a door (12) rotatably coupled to a front surface of the cabinet that opens and closes the storage compartment, a housing (14) provided at a rear surface of the door to define an accommodation space, a cool air inlet hole (141) provided at an upper surface of the housing, a basket (15) provided inside the housing and mounted to the door, the basket having a recess to provide an opening between the basket and the door, a circulation fan (20) provided at an inner upper surface of the cabinet that corresponds to an upper side of the cool air inlet hole when the door is closed, and configured to circulate cool air from the storage compartment into an inside of the housing, and a cool air flow path formed by the opening to allow the cool air to flow through the inside of the accommodation space.
