Abstract (en)
The invention concerns a power cable for providing power to a downhole tool situated within a deep well. The power cable comprises a plurality of stranded cable cores (2). Each cable core comprises an inner conductor (5) of a first conductive material, an armour core layer (6) surrounding the inner conductor of a second conductive material having higher tensile strength than the first conductive material and a conducting core layer (7) surrounding the armour core layers of a third conductive material. The inner conductor, the armour core layer and the outer conducting core layer are electrically connected to each other along the cable core's longitudinal length.
