Abstract (en)
[origin: WO2015055629A1] The invention relates to a modular cooling storage system, which has one or more storage containers, which each have cold-insulating walls (2, 3, 4, 5), comprising at least one side wall (4), a bottom (3), and a cover (2); wherein the cold-insulating walls (2, 3, 4, 5) each have two opposite lateral surfaces (21, 31), which are connected to each other in a thickness direction by edge surfaces (20, 30); and each storage container (1) at least one closable access opening (6). The lateral surfaces (21, 31) and/or edge surfaces (20, 30) of at least one of the walls (2, 3, 4, 5) of each storage container (1) have integrated coupling elements (10), wherein the coupling elements (10) are designed in such a way that the coupling elements engage with the coupling elements (10) of a directly adjacent wall (2, 3, 4, 5) of a further storage container (1), and storage containers (1) engaged with each other along a section of the walls (2, 3, 4, 5) of the storage containers have a common wall (4a, 5a) in the section.
