Abstract (en)

[origin: WO2015055759A1] The invention relates to a central unit (10) which supplies a lighting-means operating device (20, 30) for a lighting means, preferably an LED module (4), by means of a DC bus. The lighting-means operating device (20, 30) has a sensor (23, 33). The central unit (10) produces a DC supply voltage for supplying the lighting-means operating device (20, 30). Data are transferred between the central unit (10) and the sensor (23, 33) of the lighting-means operating device (20, 30) by means of a line (3), by means of which the central unit (10) supplies the sensor (23, 33) of the lighting-means operating device (20, 30) with energy.
