Abstract (en)

Assembly of parts which when mounted in a concrete mould will fixate joint reinforcement relative to the mould and the concrete panel to be cast, where said assembly comprises a first part and a second part, where said first part has a periphery delimiting a first part body, where in said body an aperture is provided through the thickness of said body, and where said second part comprises two or more sections, where when said two or more sections are assembled, their outer periphery fits inside the aperture in said first part, and where each of the sections has one or more parts of apertures, such that when the two or more sections are assembled in the aperture in said first part, one or more apertures are formed.
