Abstract (en)

The invention relates to a formwork edge element (11) of insulating material for manufacturing a formwork edge for a formwork floor of insulating material for a foundation floor to be poured for a building. The edge element comprises a bottom part (3) and a top part (12) connected to each other by means of an edge part (4). The top part extends from the edge part above the bottom part at some distance from the bottom part such that a space is formed between the bottom part, the edge part and the top part, which space is configured to receive concrete to be poured. The bottom part is configured for connection to the formwork floor and the top part is configured for placing of a wall of the building and for connection to insulating material in the wall. The invention also relates to a method for forming a foundation for a building making use of a formwork edge element according to the invention.
