Abstract (en)  
An outdoor unit is configured to accommodate a compressor and is connected to a refrigerant pipe used for circulating refrigerant between an indoor unit. The outdoor unit includes a bottom panel disposed under the compressor so as to support the compressor, a first side panel disposed on a peripheral edge of the bottom panel, a second side panel disposed at a position facing the first side panel on the peripheral edge of the bottom panel, and an outdoor heat exchanger supported above the bottom panel and extending in a direction from the first side panel toward the second side panel, wherein the outdoor heat exchanger has an end portion facing one of side end portions of the second side panel, and the bottom panel includes a projection formed at a position corresponding to the end portion of the outdoor heat exchanger and protruding in a direction from the first side panel toward the second side panel.
