Abstract (en)

[origin: WO2015059728A1] The present Model refers to a men's or women's accessory with a nebulizing spray device intended to offer the opportunity of having a small amount of liquid with them at all times, which could be their own perfume or, without prejudice to this possibility, a medicine in liquid form, to be used as needed (spray) or in the case of a medicine, also in cases of necessity or in emergency situations. The innovative concept of the present model is the expression of an action that is not known, that is, the dispensing of the liquid contained in an accessory according to the present model. An embodiment according to the present model goes beyond the independence of the aims and uses of the prior-art parts (Fig. 1 and Fig. 2), which, if assembled together, yield an innovative use (examples found in Fig. 3, Fig. 4, Fig. 5 and and the respective technical attachments, and in Fig. 6).
