Abstract (en)
[origin: WO2015059399A1] The invention relates to a flow device (4) comprising a body mounted sealingly on a container (3), a nozzle (14) arranged at an end opposite the container, a flow pipe (29) comprising a flow outlet (33) located on the nozzle and a flow intake (31) located in the mounting portion, an air-carrying pipe (30) comprising an air intake (39) located on the body and an air outlet (43), the flow device also comprising a cover (7) which is translatablely movable relative to the body, the cover comprising a first valve and a second valve engaging with a first valve seat (38) formed by the flow outlet and a second valve seat (41) which is separate from the first valve seat formed by the air intake, respectively, a return element (15) exerting a return force on the cover such as to keep the valves closed in the absence of an opposing force.
