Abstract (en)  
[origin: WO2015059426A1] The invention relates to a method for generating a flow of fluid, implemented in a device comprising a membrane (2) provided with at least one hole (20) and means (4) generating back-and-forth movements, wherein a flow is generated through the membrane by actuating said membrane, at least in the region of said at least one hole (20), according to a mode of deformation of said at least one hole, causing said at least one hole to open and close and disturbing the fluid in order to generate said flow. The invention also relates to a device suitable for implementing the method.
