Abstract (en)

[origin: WO2016060807A1] A connectivity contextual services ecosystem management system may comprise a connectivity contextual services connectivity system, one or more user devices, and one or more merchant devices. The connectivity contextual services connectivity system may deliver different connectivity contextual services to a user device and/or a merchant device in response to a context environment, in order to provide a user with a customized experience, such as allowing that user to enter into conversations with merchants, view inventory of merchants, and search for merchants with relevant products without entering a physical store.
