Abstract (en)  
[origin: WO2015059191A1] The invention relates to an electrical switch, in particular for an electrical power tool, such as an angle grinder, a drill, a grinder, a saw, a plane, or the like, comprising a contact system (6) switchable between a display and an adjustment setting and an actuating element (7) for switching the contact system (6). The actuating element (7) comprises a tappet (9) and contact piece (10). The contact piece (10) acts on the contact system (6) for switching. Further, a coupling element (11) is provided of a type such that the tappet (9) can be brought into and/or out of interaction with the contact piece (10). The interaction takes place in particular in such a way that the switching of the contact system (6) into the adjustment or the display position is enabled by means of the tappet (9) and the switching of the contact system (6) into the display position is enabled independent of the tappet (9).
