Abstract (en)
[origin: WO2015059228A1] The invention relates to a method for processing surfaces of workpieces, preferably of large substrates, and to a device for performing the method. According to the invention the processing devices are arranged on the cylindrical surface of a drum-like carrier in a vacuum chamber. The workpiece is transported over the drum and optionally caused to rotate. The drum-like carrier is rotated in such a way that the intended processing device faces the workpiece and can process the workpiece. The surface section to be processed can be selected by translating and rotating the workpiece.
