Abstract (en)

[origin: EP3061543A1] A device (1) for applying studs (6) on straps of material (S) comprises: a die (5) comprising a plurality of housings (52) intended to receive the body (60) of said studs, a lid (9) comprising a plurality of housings (92) intended to receive the head (82) of rivets (8), holding means disposed in said housings (92) of the lid to hold the heads (82) of the rivets in the housings of the lid, an intermediate plate (7) intended to be disposed between said die (5) and said lid (9); said intermediate plate (7) comprising a plurality of housings (52) intended to receive the stem (80) of said rivets. When the die (5), the intermediate plate (7) and the lid (9) are overlapped, the housings (52, 72, 92) of the die (5), the intermediate plate (7) and the lid (9), respectively, are in mutual register.
