Abstract (en)

The window (1) has a supply condition and a mounted condition in a roof construction. To form a transition between the window (1) to the interior, a first transition assembly is provided in the form of a lining support arrangement (5) connected to the frame (3) of the window (1) in its supply condition. The lining support arrangement (5) has a number of longitudinally extending lining support members (51-54) to form a frame-shaped structure connected to the frame (3) in the supply condition and the support means of the lining support arrangement (5) is provided by a lining engagement portion (535) of each lining support member (51-54), formed as longitudinal bead having a part-cylindrical cross-sectional shape.
