Abstract (en)

An apparatus (101, 101 A, 101B) is disclosed comprising a first toothed track (102A) and a second toothed track (102B) arranged parallel to the first toothed track. A handle (103, 103A, 103B) arranged to change the configuration of a window blind (104) is provided with a first toothed wheel (105A) configured to engage the first toothed track (102A) and a second toothed wheel (105B) configured to engage the second toothed track (102B). A control mechanism (106) causes the first and second toothed wheels (102A, 102B) to be rotatable only at the same rate.
