Abstract (en)

[origin: EP3062024A1] The invention relates to a household appliance (1) having a body (11); a cover (19) hinged to the body (11) and; a functional member (20) disposed on the cover (19); a switch (3) having a first terminal member (31) having a contact part (311) attached to the body (11) and a second terminal (321) attached to the cover (19) correspondingly to the first terminal member (31), contacting each other and completing an electrical transmission circuit for transmitting electric to the functional member (20). The contact part (311) of the first terminal member (31) is arranged as a free end such that resiliently movable when the second terminal (321) contacted to the contact part (311) in a manner increasing contact surfaces of the first terminal member (31) and the second terminal (321).
