Abstract (en)

[origin: EP3062025A1] The present invention relates to a rubber foot (10) for a heatable or heated metal device, in particular for a cast iron grid of a cooking hob. The rubber foot (10) includes a shaft (12) forming an upper part of said rubber foot (10). The shaft (12) includes a cylindrical body and is provided for inserting into a hole in the bottom of the metal device along the symmetry axis of said cylindrical body. The rubber foot (10) includes a head (14) forming a lower part of said rubber foot (10). The head (14) is provided for a position below the hole in the bottom of the metal device, when the shaft (12) is inserted in said hole. The diameter of the head (14) is bigger than the diameter of the shaft (12). The rubber foot (10) includes at least one wing (16) enclosing at least partially the cylindrical body of the shaft (12). The at least one wing (16) is formed by at least one ring enclosing the cylindrical body of the shaft (12) and/or by one ring enclosing the cylindrical body of the shaft (12) and subdivided by at least one recess (18). The rubber foot (10) with the shaft (12), the head (14) and the wings (16) is formed as a single-piece part.
