Abstract (en)

[origin: EP3062046A1] A method of starting a vapor compression system includes receiving an indication of a start-up of the vapor compression system, loading a set of start-up manipulated variables, wherein the start-up manipulated variables are derived from calibrated models of the vapor compression system during start-up, and running the vapor compression system in open loop control using the start-up manipulated variables for a start-up period of time.
