Abstract (en)
[origin: WO2015074267A1] An oral implement comprises a head (10) and a handle (12). The head (10) comprises a first face (14) and a plurality of cleaning elements (34, 36) extending therefrom, a proximal section (16) adjacent to the handle (12) and a distal section (18) remote from the handle (12). The head (10) further comprises a flexible bridge (20) coupling the distal section (18) to the proximal section (16), so that the distal section (18) is flexibly moveable relative to the proximal section (16). The flexible bridge (20) further comprises at least one elastomeric cleaning element extending from the first face (14); wherein the at least one elastomeric cleaning element extends along the flexible bridge (20) in a direction perpendicular to a longitudinal axis of the head (10).
