Abstract (en)

[origin: WO2015062906A1] The invention relates to a handheld or semistationary machine tool or work tool, having a housing in which there is arranged at least one mechanical actuating device which emits noise, for example in the form of structure-borne sound, during operation of the machine tool or work tool. In order to further simplify the operation of handheld or semistationary machine tools or work tools and/or to increase the service intervals or lifetime thereof, the machine tool or work tool (1) comprises at least one device (20) for sensing noise that occurs during operation of the machine tool or work tool (1).
