Abstract (en)
[origin: WO2014209210A1] The invention relates to floating platform (1) comprising at least three floating or semi-submersible peripheral units (2; 2a, 2b, 2c, 2d) and a floating or semi-submersible central unit (3). Each peripheral unit (2; 2a, 2b, 2c, 2d) is arranged connected to the central unit (3) by at least one in a substantially radial direction arranged connection member (5) and connected to the adjacent peripheral units (2; 2a, 2b, 2c, 2d) by at least one peripheral connection member (6). The invention is characterized in that at least one propulsion device (11) is arranged on each submersible peripheral unit (2; 2a, 2b, 2c, 2d) wherein the peripheral connection member (6) is an elongated object variable in length constructed to create a tension force pulling the floating peripheral units (2; 2a, 2b, 2c, 2d) towards each other.
