Abstract (en)

[origin: WO2015062595A1] Sealing cap (10) for a container closure with a cover disc (11) which has a fastening ring which is connected to an underside of the cover disc, wherein the fastening ring has a latching means for producing a releasable engagement connection with the container closure, which latching means is connected via a connection means to a pull tab arranged on the circumference of the cover disc, wherein the connection means has a cover strip which is formed in the cover disc and which is partitioned off from adjacent regions of the cover disc by lateral cover strip predetermined breaking lines having predetermined breaking means and has a pull web connected to the latching means of the fastening ring, wherein the cover strip extends from the pull tab on the circumference of the cover disc into a central inner part (18) of the cover disc within the fastening ring and the pull web is arranged in an intersection region between the cover strip and the fastening ring.
