Abstract (en)

[origin: WO2015062654A1] The present invention relates to a refrigeration appliance (1) having a plurality of independent heat exchange circuits associated with a first (2) and a second condenser (3), said condensers (2, 3) having refrigerant flow tubes in serpentine form allowing circulating of a refrigerant fluid pressurized by a compressor in association with each heat exchange circuit such that thermal energy is dissipated by a respective condenser (2, 3) of the refrigeration appliance (1).
