Abstract (en)
[origin: WO2015063169A1] The invention relates to a method for producing a tubular heat exchanger (1) consisting of at least two tubes (2). The following are fundamental to the invention: injection moulding of a respective identical local outer contour (3) around the at least two tubes (2); production of a joint connection (4) between at least two tubes (2) by means of their identical outer contours (3); sealing of the tubular heat exchanger (1) in the region of the joint connection (4) and/or along at least one part of the outer contour (3). The invention further relates to a corresponding tubular heat exchanger.
