Abstract (en)

[origin: WO2015063087A1] The invention relates to a method (100) for checking the identity of a person using an identification document by means of a mobile communication device, wherein the identification document has an electronic circuit, wherein the mobile communication device has an imaging camera, and wherein the method (100) has the following steps: capture (101) of a biometric feature of the person by means of the imaging camera of the mobile communication device to obtain a captured biometric feature; reading (103) a biometric reference feature out of the electronic circuit of the identification document by means of the mobile communication device; and comparison (105) of the captured biometric feature with the biometric reference feature by means of the mobile communication device to check the identity of the person.
