Abstract (en)

[origin: EP3064090A1] A hidden device (1) for the wall assembly of a structural component wherein shaped engagement means (15,16) for the assembly tool extend at least on two opposite sides of a respective control element (13,14) of a specific regulation mechanism in height or depth, so as to be activated in correspondence with opposite sides of the body (2); a further object of the invention relates to a structural component of a piece of furniture which comprises said device.
