Abstract (en)
[origin: EP3064678A1] A burglary-prevention device for containers with telematic connection comprising: an electronic lock (3), which can be coupled to a first lock eye (4a) and a second lock eye (4b) of leaves of a door of the container and comprises an RFID device; and a telematic unit (10), connected to the RFID device and designed to communicate with a central control unit by transmitting the instantaneous position detected by the telematic unit (10). The telematic unit (10) is designed to detect the integrity of the circuit connection between the RFID device and the telematic unit itself and is designed to emit a warning of possible burglary in the case of even partial interruption of said circuit connection.
