Abstract (en)

The present invention refers to a household apparatus having a deposit container adjustable in the height of a door, and particularly to a cooling and/or freezing apparatus, comprising a body with a compartment to accommodate goods to be cooled, a door for opening and closing said compartment having at least one deposit container, said door comprising on the inner wall thereof at least one fastening rib for fixing said deposit container. It is provided for according to the present invention that a deposit container (6) is formed in each corner area thereof which lies in the vicinity of the inner wall (2) with a holding device (14) configuring to cooperate with the fastening rib (5), said holding device (14) being preferably integral with the container (6).
