Abstract (en)

[origin: US2015122842A1] Various containers are provided that have a product volume and one or more standoff structures coupled to the product volume. The standoff structures are configured to protect the product volume. The standoff structures may, for example, prevent damage (e.g., denting, rupture, scuffing, etc.) to the product volume, such as to indicia or information disposed on the product volume, that occurs when, for example, the container is dropped, falls, is placed into contact with another object, or is placed into a confined structure.
