Abstract (en)
[origin: WO2015067866A1] The invention relates to a device for manually fitting a vehicle pedal pad (20), the pedal comprising a soleplate (10) and a pad (20) mounted by clip-fastening on said soleplate (10) and said pad (20) having a "clip" (22) intended to be "clip-fastened" in a through-orifice (12) in the soleplate (10). This novel device for assisting in fitting comprises a substantially tubular body or "lever" (31), a bearing means (32), located at a first end of said lever (31), for allowing said lever (31) to bear against a lateral part of the soleplate (10), and a pushing means, protruding from the lever (31) and at a predetermined distance from said first end of the lever (31), for pushing the clip (22) into the orifice (12) in the soleplate (10) of the pedal by exerting a manual force ("F") on the free part of the lever (31).
