Abstract (en)

[origin: WO2015067244A1] The invention relates to a display device for displaying information in vehicles, comprising a front side (11), a rear side (12), a display and a background illumination source (30). The background light (31) produced by the background illumination source (30) penetrates the display from the rear side (12) thereof and extends to the front side (11). Said display device is characterized in that the display is a TFT module and a transflective device (2) is arranged on the rear side (12) having transmission properties (21) and reflection properties (22).
