Abstract (en)  
[origin: WO2015063048A1] The invention relates to a plug for a plug connector (1), comprising an inner assembly (20), an outer sleeve (21) which is mounted such that it can move with respect to the inner assembly (20) and at least partially surrounds the inner assembly (20), and first locking means (22, 30) for locking the plug (2) to an associated plug connector part (3) when the plug (2) is plugged onto the plug connector part (3), wherein the locking arrangement can be released by a movement of the outer sleeve (21) with respect to the inner assembly (20). In this case, an additional locking element (23) is provided, said additional locking element being mounted such that it can move and it being possible to move said additional locking element to at least one stable locking position, in which the movement of the outer sleeve (21) with respect to the inner assembly (20) is blocked, and at least one stable enable position, in which the movement of the outer sleeve (21) with respect to the inner assembly (20) is enabled.
