Abstract (en)
[origin: US2016263635A1] A device for rinsing a container with a rinsing medium is described. The device includes a nozzle for introducing the rinsing medium into the container that is to be rinsed and a suction extractor for extracting by suction at least a portion of the rinsing medium that flows back out of the container. The nozzle has a medium outlet through which the rinsing medium enters the container that is to be rinsed. The nozzle is displaceably guided in a guide and is displaceable between a withdrawn position for positioning the container and a position in which it is inserted in the container for rinsing the container with the rinsing medium. A guide is disposed between the medium outlet of the nozzle and at least a region of the suction extractor.
