Abstract (en)

[origin: WO2016146470A1] The invention relates to a heddle comprising two strips (2, 3), which form the heddle shaft (6), at least one component (4) for delimiting the thread eye (5), and at least two end loops (7). The at least two strips (2, 3) are spaced in the transverse direction (Q) in the region of the thread eye (5), and the at least one component (4) is arranged in the region of the thread eye (5) between the at least two strips (2, 3). The at least two strips (2, 3) are adjacent to each other at least in sections in front and behind the thread eye (5) in the longitudinal direction (L). At at least one point in the region of at least one of the at least two end loops (7) at least one of the at least two strips (2, 3) runs in the transverse direction to a side at a distance from a central axis (15) of the heddle (1) and at a further point in the region of at least one of the at least two end loops (7) at least one of the at least two strips (2, 3) runs to the other side at a distance from the central axis (15).
