Abstract (en)

[origin: JP2016166869A] PROBLEM TO BE SOLVED: To reduce a total thickness using a resilient washer in a pivoting assembly for a timepiece. SOLUTION: The invention relates to a pivoting assembly 31 comprising an arbor 32 rotatably mounted between two bearings 33, 34, and a member 41 mounted between a shoulder 44 of the arbor 32 and a resilient washer 42. At least one of the two bearings 33, 34 comprises a limit stop 45, and the limit stop 45 is arranged to enter into direct contact with the resilient washer 42 to restrict the relative movement between the arbor 32 and the two bearings 33, 34.
