Abstract (en)

[origin: KR20150054611A] The present invention relates to a dishwasher comprising: a tub to accept dishes; a nozzle assembly to inject washing water; a vane assembly which changes the course of the injected washing water to face dishes by moving in a space between first and second positions inside the tub; and a control part to move the vane assembly to the second position when the vane assembly is in the first position. A linear washing part injects washing water while reciprocating a portion of the interior of a washing chamber, thereby reducing time for washing a small amount of dishes and intensively washing a part of a dish.
