Abstract (en)  
[origin: WO2015070951A1] The invention relates to a resectoscope (1) having a laser fibre (8), which is mounted so as to be longitudinally movable and which laser fibre (8) emits energy from the distal end thereof, and having a carriage (6) which is mounted on the resectoscope (1) so as to be longitudinally movable. The carriage has an elongate bore (15, 16, 18), which is designed to accommodate the laser fibre (8) and is fixed at least in some regions on the carriage (6), and a clamping device which is designed for connecting the laser fibre (8) to the carriage (6) by clamping. The clamping device has a clamping body (17) which is movably mounted on the carriage (6) transversely with respect to the bore (15, 16, 18) and in which a region (18) of the bore (15, 16, 18) moved therewith is disposed.
