Abstract (en)

[origin: WO2015073375A1] Various embodiments disclosed herein include systems, methods, and devices for automated delivery of medical services and products. The systems and/or methods are configured for receiving at least one input from a subject, comparing the at least one input with one or more verification datasets, generating a verification value, reinitiating receiving at least one additional input from the subject and comparing the at least one additional input with the one or more verification datasets, and communicating an output. In an embodiment, the systems and/or methods include a kiosk including at least one computing device including circuitry. Another embodiment, the systems and/or methods include a pillbox device with at least one compartment operably coupled to circuitry configured for sending a signal, and with at least one port configured for transferring data with the at least one computing device of the kiosk.
