Abstract (en)
[origin: WO2015071382A1] The invention relates to a lock (7) for a circuit breaker (1), which lock comprises a main body (8) having a cutout (9) to accommodate an actuating element (6) of the circuit breaker (1). Moreover the lock (7) comprises a projection (13) which can be moved relative to the main body (8) and can be brought into engagement with at least one opening (14) / recess in the circuit breaker (1). To this end the projection (13) is mounted in a slide (15) which is displaceable relative to the main body (8) and which slide (15) extends obliquely relative to its direction of displacement and to the direction of displacement of the projection (13) or has at least one such section. The invention further relates to an arrangement which comprises such a lock (7) and a circuit breaker (1).
