Abstract (en)

Seatpost unit (1) for fixing the adjustable height of a bicycle seat (300) to a bicycle frame, comprising a tubular body (10) with a longitudinal recess (14), a guide element (30) intended to be secured to the seat tube (100), and one or two stop elements (20; 40) arranged at a fixed or adjustable position of the tubular body (10), inside the recess (14) and fixed to the tubular body (10). The stop elements (20; 40) can stop against the guide element (30) defining a lower limit position and/or a higher limit position for the seat (300). The seatpost unit (1) allows a user to quickly and easily adjust the height of the seat to this lower limit position and/or to this higher limit position.
