Abstract (en)

A wrapping method and a packer machine (11) to fold a wrapper (9) around a group (2) of tobacco articles with a parallelepiped shape; along a wrapping path (P1) a pocket (17) is fed, which houses the group (2) of tobacco articles; the wrapper (9) is laid on a first larger lateral wall (5a) of the group (2) of tobacco articles; initially the wrapper (9) is folded around a first transverse corner of the group (2) of tobacco articles defined between the first larger lateral wall (5a) and an upper wall (3), in order to lay the wrapper (9) on the upper wall (3) giving to the wrapper (9) an "L" shape; and subsequently the wrapper (9) is folded around a second transverse corner of the group (2) of tobacco articles defined between a second larger lateral wall (5b) and the upper wall (3), in order to complete the "U" folding of the wrapper (9).
