Abstract (en)
[origin: EP3070195A1] The present invention refers to an apparatus for the positioning of pieces of cloth on sewing machines. In particular, this apparatus is capable of recovering a piece of cloth from a loader, disposing properly said piece of cloth and transporting the piece of cloth on the sewing machine by a positioning device (14) comprising a plate (52) from whose surface a first abutment element (54) protrudes and on which at least one blowing device (60) is arranged which has a blowing opening (62) flush to the surface of the plate (52)
