Abstract (en)

[origin: CN105990047A] The present invention relates to a finishing assembly comprising a control mechanism (220) and a finishing plate (210), a peripheral portion (211) of which is provided with a central recess defined by an inner edge of the peripheral portion (211). The control mechanism (220) is received in the central recess and includes a translucent portion (222) having at least one light receiving area (222a). The finishing plate (210) has a central portion (212) disposed in the central recess and surrounded by the control mechanism (220). The translucent portion (222) is configured to transmit the light received at the receiving area (222a) in the direction of the central portion (212). An electrical switch comprising such a finishing assembly is also described.
