Abstract (en)  
[origin: KR20150057970A] Provided are an X-ray imaging apparatus which can reduce X-ray dose and minimize degradation of image quality and loss of FOV, and a control method thereof. According to one aspect, the method for controlling the X-ray imaging apparatus comprises the steps of: irradiating little dose of X-ray to an uninterested region in an object region than an interested region; and detecting the irradiated X-ray and obtaining a frame image related to the object region.
