Abstract (en)
[origin: WO2015074136A1] A seat assembly for an automotive vehicle comprises a seat cushion and a seat back pivotally coupled to the seat cushion for movement between a use position and a fold flat position overlying the seat cushion. A seat track assembly is coupled to the seat cushion for providing selective adjustment of the seat assembly between an upright design position and a reclined slouch position wherein the seat back is automatically pivoted rearwardly in response to forward sliding movement of the seat cushion. A sliding fold flat latch mechanism is operatively coupled to the seat back for slidably guiding the seat back during movement of the seat assembly between the upright design position and the reclined slouch position and for actuation between a locked condition retaining the seat back in the use position and an unlocked condition allowing pivotal movement of the seat back to the fold flat position.
