Abstract (en)
[origin: WO2015075220A1] A device for protection of a seal (1) produced between two surfaces (2,3) forming an angle (α) with each other and made from an adhesive material, applied beforehand in the angle (α) formed by the two surfaces, characterised in that the seal is constituted by a trim (4) acting in combination with the seal (1), said seal cover (4) being made from a semi-flexible longitudinally profiled strip of overall triangular cross-section, one of the sides of which, the upper side (4a), has a smooth apparent face of width (l) such as to link the two angled surfaces (2 and 3) after covering with the non-hardened seal (1), the two other lateral sides (4b,4c) forming a vertex angle suitable for penetrating said non-hardened seal (1) and comprising zones (5,6) that are recessed or in relief for permanent anchorage in the seal (1) after hardening.
