Abstract (en)

[origin: WO2015074865A1] The invention relates to a vacuum pump system comprising a vacuum pump (10), in particular in the form of a screw pump. Said system is used for evacuating a chamber (16). When a desired set pressure in the chamber (16) is reached, the vacuum pump system can be operated in a standby mode. To this end, an outlet conduit (22) is connected to an inlet conduit (30) via a bypass conduit (24). In standby mode, the inlet valve (18) is closed and a bypass valve (26) is open, such that medium in the circuit can be conveyed by the vacuum pump (10). As a result, the vacuum pump is maintained substantially at operating temperature.
