Abstract (en)

[origin: WO2015077689A1] An internet-based, user-controlled aspirational savings social network system and associated method for end-to-end articulation, savings, and fulfillment of user's aspirations bridges the existing chasm between the user's savings and the purpose for their savings. A network platform facilitates users to discover and articulate aspirations and connects individual accounts assigned to the user's aspirational goals. A plan is developed for each account and a collaborative savings amplification tool of the platform increases the effective monetary amounts beyond the user's principal contributions and/or reduces the price of the aspired goods or services to advance the plan in ways that fulfill the aspirational goals. The network platform engages with a plurality of merchants associated with the aspirational goals to supply the goods or services and yield a comprehensive end-to-end solution. The saving social network system and method allows users to attain aspirations, including those that may otherwise have been out-of-reach.
